

The flexibility to perform at your best.

BENCO DENTAL'S NEW RPM™ Low Speed Handpiece System

Doing great dentistry is easier when you don't have to worry about multiple handpieces and too many attachments. RPM from Benco Dental is one handpiece that does the work of two or three. So instead of fussing over your handpiece and angle choices, you can simply get down to business.

FLEXIBILITY – Not only does RPM handle caries prep and endo therapy, it can stand in for a hygiene handpiece anytime.

WIDE RPM RANGE – Two motors (5,000 r.p.m. and 20,000 r.p.m.) allow you the speed flexibility to accomplish a variety of procedures.

FINE SPEED ADJUSTMENT – The 120° speed adjustment ring features easy-to-read settings for improved accuracy during speed-dependant procedures.

ELEGANT DESIGN – RPM is manufactured to artisan standards using only the finest machining and electroplating methods for a rich look and feel.

SMOOTH LOW PRESSURE STARTUP – RPM spins up gently at 5psi forward and 7 psi reverse, with no jumping in rotation, for silky starts you can count on all the time.

VIRTUALLY MAINTENANCE-FREE – Lubrication is required just once a week.

HIGH-TORQUE MOTOR – RPM is less likely to stall than other low speed motors when exceptionally high torque is required.

AUTOCLAVABLE – RPM tolerates sterilization at 135°C, an effective safeguard against operator/patient cross-contamination.

CHAIRSIDE REPAIRABLE ANGLES – Save you money and downtime.

MOTORS WITH 4 LINE CONNECTION:

5K	[3503-040]
20K*	[3503-059]

ANGLES & ACCESSORIES:

Torque Multiplier	[3503-068]
Straight Nose Cone*	[3503-077]
Motor to Angle Adaptor	[3503-086]
Prophy Angle Head	[3503-095]
Ball Bearing Manual Latch	[3503-102]
Ball Bearing Auto Latch Angle	[3503-120]
Ball Bearing Friction Grip Auto Latch Angle	[3503-111]
